

# HARROW DRAG

- **Turf management** - Flexible Harrow stimulates growth by surfacing the dead material, aerating the soil, and strengthening the grasses
- **Roadway maintenance** - dirt paths or gravel roads are quickly smoothed, leveled, dried, and manicured with a drawbar/harrow
- **Pasture management** - livestock waste makes the surrounding grass unpalatable for livestock. The Harrow maximizes the fertilizing benefits of waste by encouraging decomposition, spreading nutrients, incorporating moisture, uncovering growth, and aerating the soil
- **Arena resurfacing** - quickly restoring the smooth and consistent surface of an arena
- **Seedbed preparation** - Harrow will prepare a firm, level seedbed and provide excellent pack and cover

MANUFACTURED BY
